

INJECTION VALVES

FUNCTION DESCRIPTION

Injection valve for the injection of the chemical into the pipework. With removable injection tube and PVC ball valve for easy maintenance of the valve nozzle. According to your demands produced for all common hose measures. For peristaltic and diaphragm pumps.

SCOPE OF DELIVERY

Injection valve 1SK:

- PVC-ball valve 1/2"
- Removable dosing lance with dosing valve
- 1 spare valve rubber
- Hose connection (size depending on the used dosing tube – 4 x 1 / 6 x 1 / 6 x 3)

Injection valve 2SK:

For the injection of chlorine and acid at the same tapping point. Due to the resulting self-cleaning-effect maintenance efforts are reduced.

- PVC-ball valve 1/2"
- Removable dosing lance with dosing valve
- 1 spare valve rubber
- 2 x hose connection (size depending on the used dosing tube – 4 x 1 / 6 x 1 / 6 x 3)
